Outward-opening wood window
DW120

Heat conduction: Uw=0,85 W/m2K

Acoustic insulation: Rw (C, Ctr) 39 (-1, -3) dB

Weatherproofing: E1200

OPEN IN BROWSER

The idea of an outward-opening window comes from the Scandinavian countries with a harsh climate: in Denmark, Sweden and Norway, this type of window has been in use for decades. This extremely weather-resistant and particularly long-lasting window is suitable for all buildings types -both new and renovated, homes and offices. Profiles narrow to the eye and convenient opening possibilities make the room brighter and more spacious.

Thanks to its thick frame the DW120 allows us to use a thicker than usual triple glazing unit with wide spacers, that meet today's high energy efficiency rules and noise insulation requirements.

The all new DW120, quite literally, leaves no one cold.

Among various opening and locking possibilities, there is also a so-called finger lock possibility which is more traditional. Curved rustic profiling can be added to the vertical wooden parts of the window, which makes this product also suitable for classic and historic buildings.

Selective glass insures world class thermal insulation. Safety glasses, glazing for improved sound insulation and reduced solar radiation effect available upon request.
There are a wide range of colour and stain options, ask for further information and details.

More then 30 years of
experience and trust!
